Goa E-Waste Management Tracker

A district-level compilation for North Goa and South Goa, FY 2025-26 working period

Prepared by:

Snehal Thombare (25102A2008)

Anisha Gaikwad (25102A2010)

I put this together the same way I'd have built it for any other state: start with what's actually on the record, then use reasonable planning assumptions to fill the gaps that no public dataset covers yet. Goa only has two districts, North Goa and South Goa, so this is a shorter workbook than a state like Kerala with fourteen. The population figures for both districts are straight from Census 2011 (North Goa 818,008; South Goa 640,537 – Goa's next census projection isn't out yet). The list of authorised recyclers and dismantlers comes from the Goa State Pollution Control Board's (GSPCB) revised circular dated 4 June 2024, which named four operators and one Producer Responsibility Organisation (PRO) for the state. Everything in the collection, compliance, informal-sector and outreach sections is a working estimate built on the same 1.15 kg-per-person e-waste generation assumption used across these state trackers, since Goa hasn't published its own district-wise numbers for those categories. I've flagged the estimated sections clearly so they're easy to swap out once GSPCB or CPCB puts out audited figures.

1. Overall Scorecard

Running the same seven-category, 100-point formula used across these trackers, Goa lands at about 70 out of 100, which the scoring bands call “Good.” Collection performance and formal recycling both max out, mostly because the two V Recycling Industries LLP units plus GEMS give the state real installed capacity relative to its small population – Goa doesn't need Kerala-scale infrastructure to keep up with what it actually generates. The category that pulls the score down is informal-sector integration: none of the three small scrap clusters I've listed below are marked fully “Formalized” yet, so that column scores zero until at least one gets closed out.

#	Category	Weight	Score Earned (approx.)
1	Generation & Inventory	15	6.0
2	Collection Performance	20	20.0
3	Formal Recycling & Treatment	20	20.0
4	Regulatory Compliance	15	11.3
5	Informal Sector Integration	10	0.0
6	Environmental & Health Safeguards	10	10.0
7	Awareness & Outreach	10	2.5
	TOTAL	**100**	**69.8 (Good)**

2. Generation & Inventory

North Goa is home to about 56% of the state's population and generates roughly 941 tonnes of e-waste a year on this estimate, against about 737 tonnes for South Goa. The category split (IT & telecom, consumer electronics, large appliances, lighting, batteries, and everything else) follows the same proportions CPCB uses under Schedule I of the E-Waste (Management) Rules, 2022, since I couldn't find a Goa-specific category survey to replace it with. Worth noting: Goa's own waste-management body, the Goa Waste Management Corporation (GWMC), set up in October 2016, is separately building a dedicated 4,000 sq.m. e-waste dismantling facility at Pissurlem Industrial Estate in Sattari taluka, which should eventually feed into whatever this generation estimate becomes once it's operational.

District	Population (Census 2011)	IT & Telecom (kg)	Consumer Electronics (kg)	Large & Small Equip. (kg)	Lighting (kg)	Batteries (kg)	Other (kg)	Total Generated (kg)
North Goa	818,008	301,027	225,770	188,142	75,257	94,071	56,442	940,709
South Goa	640,537	235,718	176,788	147,324	58,930	73,662	44,196	736,618
STATE TOTAL	**1,458,545**	**536,745**	**402,558**	**335,466**	**134,187**	**167,733**	**100,638**	**1,677,327**

Population: Census of India 2011, district totals for Goa.

3. Collection Log

North Goa's collection runs mainly through GSPCB-registered centers and Karo Sambhav's buy-back points around Panaji, Mapusa and Bicholim. South Goa leans more on the two V Recycling Industries LLP sites in Salcete taluka for pickup, since that's where both authorised units are based. I've modelled both districts collecting somewhere around 65-70% of what they generate, which is a fair planning assumption for a state this size until GSPCB releases its own audited collection numbers – I wasn't able to find a public GSPCB collection report to source this one from directly.

District	Generated (kg)	Collected (kg)	Collection Centers	EPR Target (kg)	EPR Achieved (kg)
North Goa	940,709	658,500	18	1,034,780	812,600
South Goa	736,618	478,800	14	810,280	636,500
STATE TOTAL	**1,677,327**	**1,137,300**	**32**	**1,845,060**	**1,449,100**

4. Recycling Infrastructure

This section is the one I could back almost entirely with public records rather than modelling. GSPCB's revised circular of 4 June 2024 names four authorised units for the state: Global E-Waste Management System (GEMS), the two V Recycling Industries LLP units at Sao Jose de Areal and Fatorda (both in Salcete taluka, South Goa), and Group TenPlus, alongside Karo Sambhav Private Limited as the state's registered Producer Responsibility Organisation. GEMS describes itself on its own site as one of the largest electronics recyclers in Goa, with a recycling capacity of about 100 tonnes a year, and its Facebook page bills it as Goa's only authorised e-waste collector and dismantler at the time it was set up. Processing volumes and recovery rates for all four operators below are working estimates – GSPCB's circular confirms who's authorised, but doesn't publish their annual throughput.

Recycler / Dismantler	Authorisation	District	Capacity (t/yr)	Processed This Year (t)	Recovery Rate	Valid Till
Global E-Waste Management System (GEMS)	GSPCB authorised recycler-cum-dismantler	North Goa	100	78	76%	31-03-2027
V Recycling Industries LLP - Sao Jose de Areal	GSPCB authorised dismantler	South Goa	1,500	980	74%	31-03-2027
V Recycling Industries LLP - Fatorda	GSPCB authorised dismantler	South Goa	1,200	790	72%	31-03-2027
Group TenPlus	GSPCB authorised dismantler	Statewide	500	310	68%	31-03-2027
STATE TOTAL			**3,300**	**2,158**	**73%**

5. Regulatory Compliance

I couldn't find a public, named list of individual EPR-registered producers for Goa the way some larger states publish one, so the eight entries below are placeholders in the same style as the original template – a structure to track status against once you drop in the real registration numbers from GSPCB's EPR portal or the CPCB EPR dashboard. Six of the eight are marked compliant, one partially compliant with a show-cause notice pending, and one non-compliant with penalty proceedings ongoing. Two of the compliant entries note that their targets were met by routing collection through Karo Sambhav (the PRO) or through direct tie-ups with GEMS and V Recycling Industries LLP.

Producer / EPR Entity	Reg. No.	Status	Inspected?	Penalty?	Remarks
Entity 1	EPR/2024/GA/001	Compliant	Yes	No	Target met via Karo Sambhav (PRO)
Entity 2	EPR/2024/GA/002	Compliant	Yes	No	Target met via GEMS tie-up
Entity 3	EPR/2024/GA/003	Compliant	Yes	No	Target met
Entity 4	EPR/2024/GA/004	Partially Compliant	Yes	Yes	Show-cause issued by GSPCB
Entity 5	EPR/2024/GA/005	Compliant	No	No	Inspection pending
Entity 6	EPR/2024/GA/006	Compliant	Yes	No	Target met via V Recycling tie-up
Entity 7	EPR/2024/GA/007	Non-Compliant	Yes	Yes	Penalty proceedings ongoing
Entity 8	EPR/2024/GA/008	Compliant	Yes	No	Target met

6. Informal Sector Hotspots

Goa doesn't have anything on the scale of Delhi's Seelampur or Moradabad's scrap markets, but small informal clusters do turn up around the Mapusa and Margao market belts and near the industrial area outside Vasco da Gama. All three are early-stage: workers are being surveyed or trained, but none has been fully folded into the formal collection network yet, which is why this category drags the overall score down to zero for now. I based the locations on the general pattern of informal scrap trading in Goa's main market towns rather than on any published GSPCB survey of hotspots, since I couldn't locate one specific to e-waste.

Cluster	District	Status	Est. Workers	Registered/Trained	Action Taken
Mapusa market belt	North Goa	Partially Formalized	25	10	Awareness + registration drive by GSPCB/GEMS
Margao market belt	South Goa	Partially Formalized	20	8	Linked to V Recycling Industries LLP

Cluster	District	Status	Est. Workers	Registered/Trained	Action Taken
Vasco industrial belt	South Goa	Not Formalized	15	2	Initial survey conducted

7. Environmental & Health Monitoring

One monitoring visit is logged against each cluster so far. Soil and water testing near Margao came back over the limit for lead, with a remediation plan noted as submitted to GSPCB; the other two sites are within limit or still awaiting testing. As with the hotspots themselves, these are illustrative entries rather than confirmed GSPCB inspection records.

Site	District	Type	Date	Result	Health Camp	Screened
Mapusa market belt	North Goa	Soil	10-05-2026	Within limit	Yes	60
Margao market belt	South Goa	Soil + Water	15-05-2026	Exceeds limit (Pb)	Yes	50
Vasco industrial belt	South Goa	Water	20-05-2026	Within limit	No	0

8. Awareness & Outreach

Five outreach events are logged, from a statewide buy-back drive launched in Panaji to smaller school and municipal council drives in both districts, reaching just under 3,300 people combined. Real awareness activity in Goa tends to run through the municipal councils in Panaji and Margao and through GSPCB/GWMC jointly, which is the pattern these entries follow, though the specific dates and headcounts below are working figures rather than confirmed attendance records.

Program	District	Date	Type	Audience	Reached
Statewide E-Waste Collection Drive	Statewide	15-07-2025	Buyback/Collection	General public	1,800
School Awareness Drive	North Goa	18-04-2026	School Collection	Grades 6-10	450
Margao Municipal Collection Drive	South Goa	22-04-2026	RWA/Community	Residents' associations	300
Goa University Campus Collection	North Goa	05-05-2026	School Collection	College students	220
Panaji Municipal Awareness Session	North Goa	20-05-2026	Public Campaign	General public	500
